

Virgo 120M Final Fine-Tuning Plan

Current Dataset Inventory

Dataset	Approx Samples	Purpose
Markdown Dataset	10,206	Markdown document generation
Virgo Identity	5,526	Assistant personality and behavior
Exact Word Count	10,214	Constraint following
Number Only	8,072	Short answer control
One Sentence	10,173	Concise responses
One Word	10,150	Extreme brevity control
Yes/No	8,117	Classification ability
Total Current Dataset	~68,000	Before cleaning

Final Dataset Expansion Plan

Source	Target Samples	Role
Current Cleaned Dataset	65,000	Existing Virgo capabilities
New Chat Dataset	80,000	Conversation and reasoning
Older Instruction Dataset	60,000	General instruction following
Final Dataset Size	~205,000	Complete SFT dataset

Recommended Dataset Distribution

Category	Samples
General Instruction	70,000
Conversation	45,000
Markdown Generation	25,000
Coding/Technical	25,000
Science/Math	15,000
Writing Tasks	10,000
Virgo Identity	5,000
Short Constraint Tasks	10,000

Training Mix

Category	Percentage
General Instruction	35%

Category	Percentage
Conversation	25%
Markdown	15%
Coding	10%
Science/Math	8%
Identity	5%
Short Tasks	2%

Expected Virgo Capability

Capability	Expected Level
Markdown generation	Strong
Structured documents	Strong
Instruction following	Strong
Formatting control	Strong
Coding assistance	Medium
Scientific explanations	Medium
Complex reasoning	Needs evaluation
Long context understanding	Needs evaluation

Final Recommendation: Keep the current Markdown and identity datasets, add 80k diverse chat samples and 60k high-quality instruction samples. A final dataset of approximately 200k samples is suitable for fine-tuning a 120M parameter model.
